Profile

I am an incoming electrical engineering and computer sciences student at UC Berkeley with a growing interest in the intersection of AI, math, and stochastic problems.

Over the last year, I have been learning through direct conversations with venture professionals, writing up insights, and building a body of work around curiosity-driven research.

Outside of that, I spend time golfing, exploring business ideas, and building systems that turn learning into something shareable and repeatable.

Education

University of California, Berkeley
Berkeley, California
Interlake High School
Bellevue, Washington

Focus

AI, math, spatial systems

Current Direction

Personal projects, startups, and grinding 24/7

Focus Areas

- AI x finance research
- Venture capital interviews and startups
- Open source experimentation
- Geometry and stochastic physics

Skills & Interests

- Python
- Financial analysis
- Matlab
- Spatial Encoding
- Computational Geometry

- Full-stack development
